**Subject: Draft Manual of Patent Practice & Procedure, The Patent Office, India  
Suggestions to improve Manual**

Dear Sir,

The manual has been on the whole improvised in the following ways:

- 1) Details of changes in each amendment to Patents Act.
- 2) Explanation of inventive step and person skilled in the art.
- 3) Introduction of case studies.
- 4) Explanation of formal and substantive examination.
- 5) Explanation of the process of pre-grant and post-grant opposition.
- 6) Combining each section of the Act with the corresponding rules for a better understanding of the Act.

However, the Manual still needs a lot of improvement to ensure that the contents of the manual are technically and grammatically correct, and unambiguous. This will simplify ~~opposition procedure for the examiners and reduce the incidence of opposition and~~

[REDACTED]

litigation.

Within the limited time available, we have put together some suggestions. If the date is further extended or more time is available, we would definitely be able to provide many more suggestions for further improvement of the Manual, which is still required.

**A few points are highlighted below. More details are given in the enclosed Table.**

Many definitions in Section 2 need further explanation, e.g. definition of "pharmaceutical substance" and "inventive step".

needs to be given for Section 3(d).

*Section 3(d) In order to be patentable, any salts, esters, ethers, polymorphs, metabolites, pure form, particle size, isomers, mixtures of isomers, complexes, combinations and other derivatives of known substance, must differ significantly in the properties **with regard to efficacy**.*

At some places in the Manual, an impression is given that that “properties of the new form” and “enhancement in efficacy” are independent criteria while making comparison between the known substance and the new form of known substance.

Examples need to be given for the measures which may be used to prove significant difference in efficacy. Would the only indicators be efficacy/potency determination in animals/humans or would *in vitro* tests suffice? Could factors like better stability, more specificity, less side effects, easier formulation, wider spectrum of activity, reduction in treatment period, etc. also qualify?

**Pre-grant opposition:** A time limit (within six months after publication) should be set for filing a pre-grant opposition. At present, pre-grant opposition can be followed by

## SUGGESTIONS FOR IMPROVEMENT OF MANUAL OF PATENT PRACTICE AND PROCEDURE

### CHAPTER IV – INVENTIONS NOT PATENTABLE

| No. | Relevant Portion From The Draft Manual Of Patent Practice & Procedure                                                                                                                                                                                                                                                                                                             | Corrections /suggestions                                                                                                                                                                                                                                                                                                                                                                                             | Remarks                                                                                                                                                                                         |

|     | <b>CHAPTER II – PREAMBLES AND DEFINITIONS</b>                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                 |
| 1   | <b>Page 19</b><br><b>2.3.12:</b> “pharmaceutical substance” means any new entity involving one or more inventive steps                                                                                                                                                                                                                                                            | The definition for ‘Pharmaceutical substance’ lacks clarity. An explanation should be provided in the manual as to ‘what constitutes a pharmaceutical substance’ so that the scope of patentability of pharmaceutical substance is better understood. The word ‘entity’ needs to be elaborated and defined appropriately in the practice manual to evaluate the scope of patentability of pharmaceutical inventions. |                                                                                                                                                                                                 |
|     | <b>CHAPTER IV – INVENTIONS NOT PATENTABLE</b>                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                 |
| 2   | <b>Page 54:</b><br><i>(d) a substance obtained by a mere admixture resulting only in the aggregation of the properties of the components thereof or a process for producing such substance;</i><br><br><i>(e) the mere arrangement or re-arrangement or duplication of known devices each functioning independently of one another in a known way;</i><br><br><i>(f) Omitted.</i> | <del>(d)</del> <i>(e) a substance obtained by a mere admixture resulting only.....;</i><br><br><del>(e)</del> <i>(f) the mere arrangement or re-arrangement or duplication of.....;</i><br><br><del>(f)</del> <i>(g) Omitted.</i>                                                                                                                                                                                    | <b>On page 54</b> all the clauses following the clause “d” of Section 3 are wrongly denoted. For example, clause “e” is wrongly designated as “d”. Likewise, clause “g” and not “f” is omitted. |

|   | particle size, isomers, mixtures of isomers, complexes, combinations and other derivatives of known substance, they must differ significantly in the properties with regard to efficacy. The requirement here that namely the new form must result in enhancement of known efficacy of known substance and that in order to be distinct from the known substance, the new form must differ in the properties with regard to efficacy. | repetition of the point no. 4.5.1 .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 5 | <p><b>Page 58:</b></p> <p><b>4.5.3.</b> The examiner makes comparison with regard to <u>properties or enhancement of efficacy</u> between the known substance and the new form of known substance. In case the new form is further converted into another new form, the comparison is made between the already existing form and another new form but not between the base compound and another new form.</p>                         | <p>Point no. 4.5.3 may be re-written as follows. The reasons for this revised statement are provided in the adjacent column.</p> <p>"In determining patentability of the new form of a known substance the examiner may seek comparative data which demonstrates improved pharmacological properties and/or an unexpected advantage of the new form over the known substance. In case, the subject matter of the claimed invention is a new form which is obtained by conversion of another new form of the known substance (the parent compound), the comparative data should demonstrate improved pharmacological properties and/or an unexpected advantage of the claimed new form with that form of the known substance from which it is obtained and not the known substance ("the parent compound")."</p> <p>Example: An earlier patent application claimed a particular polymorph of a salt of a pharmacologically active compound. The alleged invention which claims a second polymorphic form must compare its advantages or efficacy with the first polymorphic form and not with the amorphous salt or the free base</p> | <p>This point in its present form is vague. It says that the examiner makes comparison with regard to "<b>properties or enhancement of efficacy</b>". It may be interpreted that the examiner may consider either "<b>properties of the new form</b>" or "<b>enhancement in efficacy</b>" as two independent criteria during the comparison. In earlier points it is specifically mentioned that the new form should differ in properties with regard to efficacy. In other words there should be a co-relation between properties and enhancement in efficacy.</p> |
| 6 | <p><b>Page 58:</b></p> <p><b>4.5.4.</b> The comparison with regard to properties</p>                                                                                                                                                                                                                                                                                                                                                  | Point no. 4.5.4 may be re-written as follows. The reasons                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | This statement may be                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|   | <p>or enhancement of efficacy is required to be made at the time of date of filing of the application or priority date if the application is claiming the priority of any earlier application but not at the stage of subsequent development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>for this revised statement are provided in the adjacent column.</p> <p>"The comparison with regard to <u>properties in terms of enhancement</u> in efficacy of the new form is required to be made at the time of date of filing of the application or priority date if the application is claiming the priority of any earlier application but not at the stage of subsequent development."</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>interpreted that the examiner may consider either "<b>properties of the new form</b>" or "<b>enhancement in efficacy</b>" as two independent criteria during the comparison.</p> |
| 7 | <p><b><u>Pages 58-59:</u></b></p> <p><b>4.5.7. (i) Isomers:</b> Isomers are different compounds that have the same molecular formula which may be broadly divided into two kinds, namely,</p> <ul style="list-style-type: none"> <li>- structural isomers or positional isomers and,</li> <li>- stereo isomers.</li> </ul> <p>Structural isomers or positional isomers may be structurally similar or dissimilar compounds. The simplest examples are butane and isobutane and ethanol and dimethyl ether. In the former case the compounds are having structural and functional similarity.</p> <p>However, in the second set of compounds, although they have the same molecular formula but are structurally and functionally different. Such isomers even having close similarity may be considered to be novel over the prior art. Isomers having the same empirical formula but having structural differences may be considered novel and may not normally offend "obviousness" as they are structurally different.</p> | <p>The explanation provided for isomers should be revised as follows:</p> <p>"(i) <b>Isomers:</b> Isomer is the term used to describe two or more chemical compounds which can be represented by the same molecular formula. There are two main types of isomers:</p> <p>(a) <b>structural or positional isomers; (b) stereoisomers.</b></p> <p>(a) <b><u>Structural or positional isomers</u></b> Structural isomers are molecules that have the same chemical formula, meaning they have the same atoms in each molecule, but differ in the order in which the atoms are connected. The different order of the atoms produces two completely different molecular structures. The simplest examples are butane and isobutane as one set of structural isomers and ethanol and dimethyl ether as the other set. In the first set, the compounds are having structural and functional similarity whereas in the second set although they have the same molecular formula they are structurally and functionally different. Such isomers even though having close similarity may be considered to be novel over the prior art. Isomers having the same empirical formula but different structures may be considered novel but may still lack inventive step unless a clear advantage is shown.</p> | <p>The statements are re-phrased for clarity and precision.</p>                                                                                                                     |

| <p>prima facie obvious.</p> <p>Once a compound having a chiral center is known, its enantiomers are obvious because a person skilled in the art knows that a compound having a chiral center exists in two optically active forms. Hence, a product patent may not be granted for the enantiomer form. However, when a new compound is claimed having chiral</p> | <p>enantiomers (optical isomers) should be provided. Also, the following explanation may be included under the heading.</p> <p>"Where a compound having a chiral centre is known to have a particular property (therapeutic use), and the problem is to find a compound having the same property in an enhanced level, the question inevitably arises whether one of the isomers in isolation is an obvious solution. It is reasonable to presume that it is common general</p> | <p>required.</p> |

|    | <p><b>4.5.10</b> The mere use of a known process, machine or apparatus unless such known process results in a new product or employs at least one new reactant:- Mere use of a known process is not patentable unless such known process results in a new product or employs at least one new reactant. Similarly mere use of known apparatus or machine for another purpose is also not considered patentable.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>As in other cases the heading "<b>The mere use of a known process, machine or apparatus unless such known process results in a new product or employs at least one new reactant</b>" should be indicated in bold.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |       |
| 16 | <p><b>Page 62:</b></p> <p><b>4.5.13</b> In a patent application No. 782/Cal/1981, dated 13th July, 1981, an invention related to pharmaceutical composition exhibiting anti-phlogistic, antipyretic and analgesic activity and high gastroenteric tolerance in unit doses form which contained imidazol salicylate as the active ingredient in the amount of 100-600 mg and an inert carrier was claimed which was later amended to a process for the preparation of novel composition containing imidazole salicylate having formula 1, as the active principle . The invention was characterized in a product that was previously obtained by reacting, mole by mole, acetylsalicylic acid with imidazole in an inert organic solvent and that, using the solid product obtained in the reaction after purification by recrystallization , homogenous composition were produced with pharmaceutically acceptable vehicles suitable for oral, parental or <u>topic</u> administration. It was held by the Controller that the active compound such as imidazole salicylate was known in the art and applicant could not develop any special property or even improve upon the property of the compound to be mixed up with the usual carrier</p> | <p>It is understandable from the description under <b>point no. 4.5.13</b> that the patent application no. 782/Cal/1981 was rejected by the Controller as the amended claim directed to process for preparation for novel composition as it was a known process as well as no new reactant was employed in the claimed process. However, the manner in which last statement: "Furthermore, the description contained no indication of using any special type of solvent for its purification by re-crystallization and, <u>therefore, the invention was not patentable under section 3(d) of the Act.</u>", is recited is erroneous. From the statement it appears that the patent application no. 782/Cal/1981 which was filed on July 13, 1981 was found not patentable under Section 3(d) at the time the Controller rejected the application. The Patent Act, 1970 which was in force prior to 2005 (or even 1995) didn't have the section 3(d).</p> <p>Therefore, the aforementioned statement should be revised to indicate that " like wise inventions directed to process for obtaining compositions may be considered not patentable under section 3(d) by applying the same standards as applied in the above case.</p> <p>Additionally the term "topic" should be replaced with the term "topical".</p> | ----- |

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                |       |

| 20 | <p><b><u>Page 63</u></b></p> <p><b>4.6.3.</b> However, an admixture resulting into synergistic properties of a mixture is not considered as mere admixture, e.g., soap, detergent, lubricants and polymer composition etc.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>This statement is vague. It is not clear as to how soap or detergent or lubricants or polymer composition would be regarded as mixtures having synergistic properties and not mere admixtures. Proper explanation as to what criteria or standard is applied to regard the specified examples, as having synergistic properties should be provided.</p>                                                                                                                                                                                                                                                                                                                                |  |
| 21 | <p><b><u>Page 63:</u></b></p> <p><b>4.6.5.</b> In assessing the inventive step involved in an invention based on a combination of features, consideration must be given to whether or not the state of the art was such as to suggest to a skilled person precisely the combination of features claimed. The fact that an individual feature or a number of features were known does not conclusively show the obviousness of a combination.</p> <p><b><u>Page 64</u></b></p> <p><b>4.6.6.</b> A mere aggregation of features must be distinguished from a combination invention. The existence of a combination invention requires that the relationship between the features or groups of features be one of functional reciprocity or that they show a combinative effect beyond the sum of their individual effects. The features should be functionally linked together which was the actual characteristic of a combination invention.</p> <p><b>4.6.8.</b> In general all the substances which are produced by mere admixing, or a process of producing such substances should satisfy the requirements of synergistic effect in order to be patentable. The synergistic effect should be clearly brought</p> | <p>The statements made in point nos. 4.6.5 and 4.6.6 are complex in nature and also ambiguous. In fact, point no. 4.6.8 is good enough to explain the criteria to assess patentability of an invention which falls under the scope of section 3(e). It is clear from point no. 4.6.8 that to establish patentability of an invention directed to a composition containing two or more known substances, it is essential to demonstrate synergism between the known substances contained in the composition. This may be well understood with the case law or examples that follow the explanation.</p> <p>In view of the above, it is suggested to delete point nos. 4.6.5 and 4.6.6.</p> |  |

|    | <b><u>out in the description and examples by way of comparison at the time of filing of the application and should be stressed in the principal claim.</u></b>                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 22 | <b><u>Section 3(i)</u></b><br><b><u>Page 68</u></b><br>3(i) Any process for the medicinal, surgical, curative, prophylactic, diagnostic therapeutic or other treatment of human beings or any process for a similar treatment of animals to render them free of disease or to increase their economic value or that of their products. | <p>It would more appropriate to provide an explanation and provide standards / criteria to assess patentability of an invention which falls under the scope of section 3(i) before providing any illustrations/ case etc. This suggestion may be considered for other clauses as well.</p> <p>In this case it is essential to explain as <b>to why any process for the medicinal, surgical, curative, ..... or other treatment of human beings or animals would not be considered patentable.</b></p> <p>In this case, it is pertinent to draw one's attention to the definition of "invention" provided under section 2(j) of the Act. As per section 2(j) , "an invention means new product or process involving an inventive step and <b>capable of industrial application</b>". The criteria of "capable of industrial application" is relevant to the section 3(i) as medicinal, surgical, curative, diagnostic methods etc. are practiced on the human body and therefore, they are not considered to be industrially applicable. Ultimately such methods are not inventions under the definition of the term "invention" under the act. However, it should be strictly evaluated whether the method under consideration is <b>practiced directly</b> on a human or an animal body, <b>if not</b>, then the patentability of such a method should be considered as an invention assessed by applying the other criteria of novelty and inventive step.</p> |  |
|    | <b>CHAPTER VI: PUBLICATION AND EXAMINATION OF APPLICATIONS</b>                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 23 | <b><u>Page 152-153</u></b><br><b>6.2.7 b) Steps involved in substantive examination</b>                                                                                                                                                                                                                                                | <p>In Form 1, the declaration from the applicant requires that permission from competent authority for use of biological material will be submitted <b>before the grant of the patent.</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |

|    |                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |

|    | Step x. requires permission from National Biodiversity Authority as a requirement during substantive examination | <p>This needs clarification.</p> <p>Permission from the National Biodiversity Authority (NBD) requires the applicant to sign an Agreement agreeing to pay royalty (which may change on a case by case basis) in the event the patent is licensed or in the event of commercial production,.</p> <p>It is difficult to arrive at a royalty rate before substantive examination without knowing which claims will be finally allowable.</p> <p>The permission from the NBD should not be required before substantive examination. Once the patent is ready for grant, the permission from the NBD should be obtained and submitted by the Applicant.</p> |  |
| 24 | <b>Page 174</b><br><b>6.6.2 Flow chart of examination procedure and Page 180</b>                                 | The flow chart "Procedure for the grant of patent" showing pre-grant opposition needs to be modified indicating (perhaps with an asterisk) that the hearing, etc should follow request for examination and not before request for examination. The Controller will consider pre-grant opposition only if a request for examination has been filed in respect of the patent application.                                                                                                                                                                                                                                                                |  |
|    | <b>CHAPTER VII: OPPOSITION PROCEEDINGS TO GRANT OF PATENT</b>                                                    | A time limit (within six months after publication) should be set for filing a pre-grant opposition.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
